Paper and Water:
A Guide for Conservators

Paper and Water: A Guide for Conservators

Second revised and enlarged edition

Gerhard Banik
Irene Brückle

With contributions by

Vincent Daniels
Ute Henniges and Antje Potthast
D. Steven Keller
Joanna M. Kosek
Reinhard Lacher and Günther Wegele
Anthony W. Smith
Alfred Vendl and Stefan Fischer
Paul M. Whitmore

Siegl
München

The printing of the first edition was financially supported by ICCROM and the former Institute of Paper Conservation (IPC), today part of ICON. The project 112 693 "Water in Paper" has been funded with support from the European Commission. This publication reflects the views only of the authors, and neither the Commission, nor other donors can be held responsible for any use which may be made of the information contained therein.

First edition 2011 published by Butterworth-Heinemann – an imprint of Elsevier (Oxford)

This edition published by Siegl (München) 2018

This book was carefully produced. Nevertheless authors and publisher do not warrant the information contained therein to be free of errors. Readers are advised to keep in mind that statements, data, illustrations, procedural details or other items may be inadvertently inaccurate.

British Library Cataloguing in Publication Data.

A catalogue record for this book is available from the British Library.

Graphic design and layout: Hellmut G. Bomm, D-71522 Backnang, www.hgbomm.de

Printing: Druckhaus Waiblingen Remstal Bote GmbH

Albrecht-Villinger-Strasse 10, D-71332 Waiblingen, www.dhw.de

Printed on permanent acid-free paper (100 g/m² Magno Volume)

according to DIN 6738, Lifespan class – LDK 24-85

ISBN: 978-3-935643-91-7

Publisher: Anton Siegl Fachbuchhandlung GmbH

Kirchenstrasse 7, D-81675 München, www.siegl.de

For F. Christopher Tahk

*a visionary teacher
who enlightened generations of students
on the principles of science in conservation*

and in memory of our colleague and friend

Günther Wegele

*who established an improved approach to
preservation based on material science
through his expertise in paper- and board
making technologies*

Paper and Water: A Guide for Conservators

Contents	Preface to the second edition	xvii
	Foreword from the perspective of the conservator <i>Kate Colleran</i>	xviii
	Foreword from the perspective of the conservation scientist <i>Jan Wouters</i>	xix
	Introduction <i>Gerhard Banik and Irene Brückle</i>	xxi
	User's Guide	xxvii
	Animations and video clips	xxxiv
	List of abbreviations	xlvi
	Acknowledgements	li
1	Relevant Chemistry <i>Gerhard Banik</i>	1
	1.1 Basic principles	2
	1.2 Covalent and ionic bonding	9
	1.3 Electronegativity	12
	1.4 Hydrogen bonding	14
	1.5 Van der Waals forces	16
	1.6 Carbon and glucose	16
	Summary	21
	References	21
2	Properties of Water <i>Gerhard Banik</i>	23
	2.1 Molecular structure	24
	2.2 Surface tension	27
	2.3 Viscosity	30
	2.4 Volatility	31

2.5	Aggregate states of water	34
2.6	Dissolution/dissolving ability	36
2.7	Solubility of organic liquids in water	39
2.8	Ionic components in natural water	41
2.9	Hardness of water	43
2.10	Water purification	46
2.10.1	Filtration	47
2.10.2	Disinfection by ultraviolet radiation	47
2.10.3	Activated carbon filtration	48
2.10.4	Distillation	48
2.10.5	Demineralisation	49
2.10.6	Reverse osmosis	50
2.11	Purified water in paper conservation	52
	Summary	52
	References	53
3	Dissociation of Water: Acids and Bases	57
	<i>Gerhard Banik</i>	
3.1	Dissociation of water	58
3.2	Acids and bases	61
3.3	The hydronium ion (H_3O^+)	64
3.4	Strength of acids and bases	65
3.5	The pH concept	69
3.6	The pH of salt solutions	73
3.7	Buffer solutions – the carbonate buffer	76
	Summary	78
	References	78
4	Structure and Properties of Dry and Wet Paper	81
	<i>Irene Brückle</i>	
4.1	Cellulose structure	83
4.2	States of water absorption in cellulose	87
4.2.1	Cellulose without water	89
4.2.2	Cellulose and monomolecular water layers	89
4.2.3	Cellulose and multimolecular water layers	90
4.2.4	Cellulose and capillary water	92
4.2.5	Simultaneity of water states	94
4.3	Gel and hysteresis properties of cellulose	94
4.4	The structure of dry and wet paper	97
4.4.1	Cellulose chain (level I)	98
4.4.2	Microfibril (level II)	98

4.4.3 Lamella (level III)	100
4.4.4 Fibre (level IV)	101
4.4.5 Paper microstructure (level V)	104
4.4.6 Paper macrostructure (level VI)	106
4.5 The porosity of paper	109
4.6 The strength of paper in relation to its moisture content	111
4.7 Using the paper model	113
Summary	115
References	115
5 Effect of Pulp Processing on Paper-Water Interactions	121
<i>Irene Brückle</i>	
5.1 The native fibre	122
5.1.1 Hemicelluloses	124
5.1.2 Lignin	125
5.2 Chemical processes	127
5.2.1 Pulping	128
5.2.2 Bleaching	129
5.3 Effect of chemical processing on fibre composition	130
5.4 Effect of chemical processing on fibre porosity	133
5.5 Effect of chemical processing on fibre reactivity	135
5.6 Beating and refining	138
Summary	140
References	140
6 Effect of Sizing on Paper-Water Interactions	145
<i>Gerhard Banik, Irene Brückle, Reinhard Lacher and Günther Wegele</i>	
6.1 Sizing technologies	146
6.2 Surface sizing with gelatine	150
6.3 Gelatine sizing in relation to paper properties	153
6.4 Internal sizing with rosin	156
6.5 Rosin sizing in relation to paper properties	160
6.6 Internal reactive sizing agents	162
6.7 Reactive sizing in relation to paper properties	164
6.8 Properties of sized paper in general	165
Summary	168
References	168

7	Paper Drying in the Manufacturing Process	173
	<i>D. Steven Keller</i>	
7.1	Water removal in paper manufacturing	175
7.1.1	Wet end	177
7.1.2	Dry end	180
7.2	Drying of individual lignocellulosic fibres	184
7.3	Drying of the fibrous network	190
7.4	Network shrinkage from fibre shrinkage	191
7.5	Structural factors that control shrinkage	192
7.5.1	Fibre orientation	194
7.5.2	Development of residual stresses	195
7.6	Drying of the web in papermaking	197
7.6.1	Wet straining and draws	198
7.6.2	MD drying restraint	199
7.6.3	Drying strategies	200
7.6.4	CD shrinkage	201
7.6.5	Development of surface properties	203
7.7	Historical drying of paper	203
7.7.1	Loft drying	204
7.7.2	Contact restraint drying	204
7.8	Rewetting and humidity response of paper	205
7.8.1	Cockling	206
7.8.2	Dimensional stability	207
7.8.3	Hornification	210
	Summary	211
	References	213
8	Paper Ageing and the Influence of Water	219
	<i>Paul M. Whitmore</i>	
8.1	Major changes in paper with ageing	221
8.1.1	Strength loss	221
8.1.2	Accumulation of small organic compounds and acidification	222
8.1.3	Discolouration	223
8.1.4	Crystallinity and moisture content changes	223
8.2	Cellulose chain-breaking reactions	223
8.2.1	Hydrolysis	224
8.2.2	Oxidation	228
8.2.3	Alkaline degradation	232
8.2.4	Mechanically assisted degradation	234
8.3	Discolouration reactions	238

8.4	The study of paper ageing	240
8.4.1	Measures of paper ageing	241
8.4.2	Study of naturally ageing paper	243
8.4.3	Accelerated ageing of paper	245
8.5	Stabilisation of paper	246
	Summary	248
	References	248
9	Characterisation of Paper	255
	<i>Ute Henniges and Antje Potthast</i>	
9.1	General aspects	258
9.2	Methods of characterising paper	260
9.2.1	Mechanical paper testing	263
i.	Tensile strength	264
ii.	Zero-span tensile strength	265
iii.	Tear strength	266
iv.	Folding endurance	267
v.	Bursting strength	267
9.2.2	Microscopy	269
9.2.3	pH and alkaline reserve	270
9.2.4	Colour measurement and brightness	273
9.2.5	Molar mass and molar mass distribution	274
9.2.6	Cellulose oxidation	278
9.2.7	Non-destructive paper analysis	281
9.3	The meaning of kinetics preconditions and forms of application	284
9.3.1	An introduction to chemical kinetics	284
9.3.2	Using chemical kinetics to characterise paper	285
9.3.3	The Arrhenius plot: generation and extrapolation	287
	Summary	292
	References	293
10	The Introduction of Water into Paper	303
	<i>Irene Brückle and Gerhard Banik</i>	
10.1	Humidity	305
10.2	Humidity and paper	311
10.3	Liquid water and paper	312
10.4	Water transport mechanisms in paper	316
10.5	Paper in humid environments	320
10.6	Water introduction as conservation treatment	322
10.6.1	Working at elevated RH conditions	325

10.6.2	Working with water mist	328
10.7	Paper and liquid water plus wetting agents	329
10.8	Factors influencing water absorbency of paper objects	332
	Summary	334
